

# WAVE Systems

## Remotely Controlled Weapon Stations

WAVE systems are a state of the art, Combat Proven, fully stabilized remotely controlled weapon station, developed by IMI SYSTEMS Ltd. (IMI) to answer modern battlefield challenges, providing a complete solution for targeting and weapon handling from within a protected position. The unique system's features of stabilization and image processing enhance crew capability of acquiring targets, improving hit probability in day or night, static and dynamic conditions. The WAVE is designed as a compact, lightweight, low profile system, easily installable on all types of combat vehicles, marine platforms and static posts. The WAVE's modular design allows to select a variety of optical devices, and enables flexible control, connections to additional systems, and could be easily tailored to specific customer needs and budgets.
